Our complete line of placing systems, from our placing booms and modular towers to our detach kit and accessories, maximize your truck-mounted boom flexibility and provide extra avenues of revenue generation.

With placing booms, you can place concrete faster, more uniformly and with pinpoint accuracy. Just as important, Putzmeister placing systems can help you save time and money with the quickest and easiest truck-to-tower conversions, while promoting job safety and contractor flexibility.
COMPLETE SYSTEM SUPPORT FROM START TO FINISH

At Putzmeister, we take a complete systems approach to your jobs. Our specialists work with you from the inception of a project to completion, including specifying equipment, consulting on concrete composition, and designing a system for maximum placing coverage. And whatever your equipment needs – from placing booms, towers and mounting and climbing configurations, to trailer pumps, boom pipes, gate and diversion valves and more – our comprehensive product line has you covered.

Through Putzmeister America, Inc.’s Special Applications Business (SAB), the complete systems approach is realized. We offer you all products to all projects in concrete delivery and placement. We remain in constant contact with you from the estimating stages of a project, to working with you on delivery times, customizing confidential solutions for unique scenarios, service, parts and training, as well as maintenance of equipment.

But we don’t stop there, the support continues. We’re there to support contractors by supplying information on unit placement, offering technical data, and ensuring our equipment performs to specifications. Putzmeister technicians are available across the country to help in emergency situations, offer advice and answer questions that arise.

Our local subsidiaries and qualified distributors can also assist with:

- Complete startup support
- Technical assistance
- Classroom and on-site training
- Quick turnarounds on genuine Putzmeister parts – more than 20,000 in stock for next-day delivery
- Warranty work

Our goal is the same as your goal: optimum efficiency on each job in terms of placement and the bottom line.

PLACING SYSTEMS AROUND THE WORLD

Putzmeister placing systems have played a vital role in the construction of these landmarks:

- Hoover Dam Bypass
- Burj Khalifa
- The Wilshire Grand
- Oakland – Bay Bridge
- Tappan Zee Bridge
- Skyline at MacArthur Place
- Hydro-Quebec Eastmain – 1 Dam and Power House
- New Orleans GIWW Bypass Gate
- Trump Ocean Club International Hotel & Tower
- Hollywood & Vine – W Hotel & Residence
- Tacoma Narrows Bridge
- Energia Costa Azul
- Wachovia Corporate Center
- CityCenter™ Las Vegas
Putzmeister’s commitment to innovation has produced the most advanced placing booms available. Our leading-edge engineering has developed many products with unique features that set our equipment apart. For example, our placing systems have the highest freestanding heights in the industry without counterweight.

This exclusive technology helps keep you on top of your jobs.

Putzmeister’s vertical support system firmly supports the tower using aluminum wedges for lateral bracing. This support option is available for use with our pin tower system.

Putzmeister’s modular high-strength square tower easily expands for use at a variety of heights and floor levels. It protects delivery line and power connections inside the tower, makes it easier to block out and patch floor openings, and allows for convenient inside ladder access.

Only Putzmeister towers can free stand up to 80 ft. (24m) heights without counterweight – the highest in the industry.
HIGHEST REACH ABOVE UPPER WEDGE POINT

With up to a 46 ft. (14m) overhang before it’s necessary to raise the boom, we offer the market’s greatest height above the upper wedge point. Pour more floors with less jumps using our highly versatile support system.

VERSATILE PEDESTAL

Our placing boom and pedestal are separate components so they can be moved together or individually, depending on the capacity of the crane on site. For easy reconnection, just lower the pedestal until the ears hit the lugs. The pedestal precisely aligns itself.

NO COUNTERWEIGHT ON BOOMS

No labor intensive and cumbersome counterweight is needed with Putzmeister placing booms, saving time and labor.

EASIEST BOOM TO RAISE AND MOVE

Our simple Hydraulic Connection and easy four-pin connection make our boom the easiest to raise and move in the industry. Pick up and move the entire system in under ten minutes.

LIGHTWEIGHT BOOM

Our low-weight placing booms provide lighter crane picks and allow the boom to be positioned farther from the crane for greater overall placing coverage. Plus, the highly versatile four-section booms mean more effective reach.

SPACIOUS PLATFORM

Safety-conscious platform allows convenient chest height access to four-pin connection, making setup a breeze. Plus, the platform allows a bird’s eye view for the operator.
EASY DOES IT – EVERY TIME

Putzmeister’s Series II Detach Boom is available for MX 24/28Z and MX 36/40Z. Only Putzmeister gives you the flexibility to install the Series II kit on your initial boom pump order, or add at a later date. The Series II kit is the fastest and easiest truck-to-tower conversion in the industry, bringing more efficiency to your time-sensitive jobs and is adaptable to most Putzmeister pumps manufactured after 1985.

The quick detach kit, featuring our exclusive Hydraulic Connection technology, is ideal for situations in which the boom must be frequently transferred. It allows the operator to couple and uncouple individual hydraulic hoses while not under pressure.

To reduce flyweight by 4,850 lbs. (2,220kg), the pedestal can be left on the tower.
MOVE THE BOOM IN FOUR EASY STEPS

STEP 1 – Hydraulic Connection

STEP 2 – Detach boom and lift

STEP 3 – Fly boom from truck to tower

STEP 4 – Position, pin and pump

RS 750 PIN CONNECT

Four heavy-duty pins in the pin system permit faster and easier connections when installing or raising the placing boom tower. The pin system gives you the flexibility to choose between a variety of mounting and climbing configurations.
Years of experience in designing placing systems for countless applications have resulted in Putzmeister’s ability to offer an extremely efficient placing boom tower and the widest variety of mounting and climbing configurations.

Whatever your needs, Putzmeister has a system to meet your site’s unique requirements.

MOUNTING AND CLIMBING VERSATILITY

Climbing
- Inside Climbing
- Hydraulic Climbing
- Universal Tie Frame

Mounting
- Freestanding
- Foundation Base Plate
- Ballasted Base
- Clamp Down Mounting Base
- Adjustable Wall Bracket

C  UNIVERSAL TIE FRAME

The Universal Tie Frame, sometimes referred to as Outside Tie-In, secures the tower inside or outside the structure.

C  INSIDE CLIMBING

Supported by the building, the unit easily climbs via crane.

C  HYDRAULIC CLIMBING

The unit can climb without a crane using two lift cylinders and the pedestal’s hydraulics.

M  FREESTANDING

Only Putzmeister reaches up to 80 ft. (24m) freestanding heights without counterweight.

M  FOUNDATION BASE PLATE

Convenient floor support plates for use with an existing concrete slab.
**M BALLASTED BASE**

An optional kit is available for freestanding applications without a foundation.

---

**M CLAMP DOWN MOUNTING BASE**

Clamps down to an existing structure or form framework. Used with or without a tower.

---

**M ADJUSTABLE WALL BRACKET**

Specially engineered, the wall bracket does not anchor to the forming system, avoiding form vibration.
Ideal for demanding applications, such as high-rise buildings, treatment plants, precast plants, bridges and dams, in addition to decks, walls and columns – Putzmeister’s complete line of placing systems give you options to better serve your specialty application requirements.

**Our placing systems:**

- Large scale booms achieve up to 138’ 1” (42.09m)
- Allow for larger pours due to speed and placement and eliminates waste
- Cuts down on size of crew, reduces labor and compresses job schedule
- Frees crane hook time for other tasks
- Promotes safety on deck and allows operator to see placing crew and precisely adjust boom
- Place concrete easily around or over obstacles
- Eliminates shock loading of forms
- Provide minimum separation to promote a smoother finish
- Precast applications
  - Mounts directly to Putzmeister tower anchors on foundation – other mountings possible
  - Uses only 16 sq. ft. (1.5m²) floor space
  - Allows continuous concrete placement into forms
  - Tower protects delivery lines and power connections

### STANDARD FEATURES — MX 24/28Z, MX 28/32Z, MX 36/40Z

- Multi-Z boom
- Four-section boom with one-piece slewing head
- 365° rotation
- 5" (125mm) pipeline with PM cast manganese elbows (MX 24/28Z, MX 28/32Z)
- 4.6" (117mm) twin pipe (MX 36/40Z)
- 10' (3m) end hose coupled - one end
- Power beyond for hydraulic jacking
- Combi electric switch box
- Centralized lube location
- Modular Boom Controls (MBC)
- World standard control panel
- Cable remote w/130' (40m) cable
- Emergency stop
- High quality paint – blue and white
- Operational & spare parts manuals

**STANDARD FEATURES — MX 43/47Z**

- Z-Fold boom  
- Five-section boom with one-piece slewing head  
- 365° rotation  
- 5” (125mm) pipeline with PM cast manganese elbows  
- 10’ (3m) end hose coupled - one end  
- Combi electric switch box  
- Grouped lube location  
- Gravity hook  
- Modular Boom Controls (MBC)  
- World standard control panel  
- Cable remote w/130’ (40m) cable  
- Emergency stop  
- High quality paint - blue and white  
- Operational & spare parts manuals
ADDITIONAL COMPONENTS FOR A COMPLETE SYSTEMS APPROACH

As a specialist in concrete and material placing equipment, Putzmeister offers additional components — everything your placing system needs to help you get the job done on time, and on budget.

GATE AND DIVERSION VALVES
Gate valves and hydraulic diversion valves are completely leak-proof to meet modern pipeline requirements, while hydraulic diversion valves are also ideal for use with two or more delivery lines.

BOOM PIPES
Wear-resistant boom pipes, reducers and pipe components from Putzmeister Pipe Technology deliver strength and durability throughout the pipeline.

RV 0, RV 7, RV 10, RV 12 AND RV 13 DECK PLACERS
A cost-effective solution for placing concrete when large surfaces obstruct a truck-mounted pump or other placing challenges arise. Putzmeister deck placers feature a boom radius up to 41 ft. (12.6m). Manually operated, the deck placers can be maneuvered into tight areas with a 360° articulating boom. Large areas up to 4,860 sq. ft. (450m²) can be covered from just one setup location. Lightweight and compact.

BSA TRAILER PUMPS
Putzmeister BSA High Pressure, High Performance Trailer Pumps offer smooth and reliable pumping with superior durability. The unbeatable flexibility is exceptionally convenient.
PLACING SYSTEMS

ADVANTAGES

- Project support from start to finish
- Highest reach above upper wedge point
- Square tower with modular design
- Simple bracing with vertical support
- Versatile pedestal
- Move entire system in under 10 minutes
- Highest freestanding heights
- No counterweight on booms
- Spacious platform
- Lightweight booms
- Multiple mounting and climbing configuration options

Not all parts are created equal. Putzmeister offers longer lasting, better performing parts under increased wear conditions. Our in-stock inventory includes more than 20,000 parts totaling more than $40 million dollars. This means greater savings and less downtime.

CUSTOMER SUPPORT AND SERVICE

Count on 24/7 support from Putzmeister’s highly trained technical support team to keep your equipment operating smoothly.
